

A Physical Barrier. An Added Layer of Protection for Critical Equipment.

Tammet's modular steel mesh enclosure D-Block™ is designed to help protect essential equipment against drone threats and unauthorised intrusion. Rigid wall and roof panels form a sacrificial outer barrier intended to take the impact and help protect the assets inside, supporting operational continuity.

Protection from the Sides and Above

Framed steel mesh panels create a protective enclosure around and above your equipment as part of your site's overall security strategy. The open mesh structure allows airflow and visibility through the enclosure.

Potential applications include generators, communications equipment, and other essential assets at industrial and critical infrastructure sites.

Quick to Deploy and Easy to Maintain

The modular system is designed for quick, straightforward assembly and efficient maintenance.

- **Minimal tools required:** Installation only requires two combination wrenches.
- **Interchangeable parts:** Damaged components can be replaced to simplify repairs.
- **Built-in access:** Wall mounted access door and service hatch as an emergency exit are included.
- **UV-resistant finish:** Powder Coated to NATO Green, RAL 6031.
- **Efficient shipping and moving:** Components and packaging are optimized for 20 ft ISO Shipping Container. D-Block™ enclosure packaging has lifting hooks for local movement to deployment sites.

Modular Dimensions for Your Site

Configure the enclosure to suit your equipment and available space.

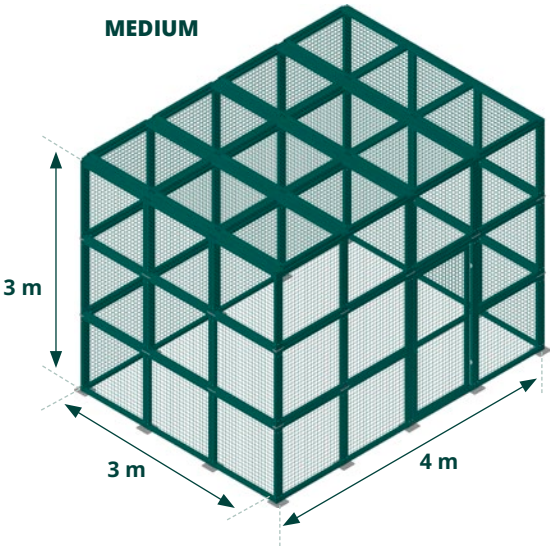

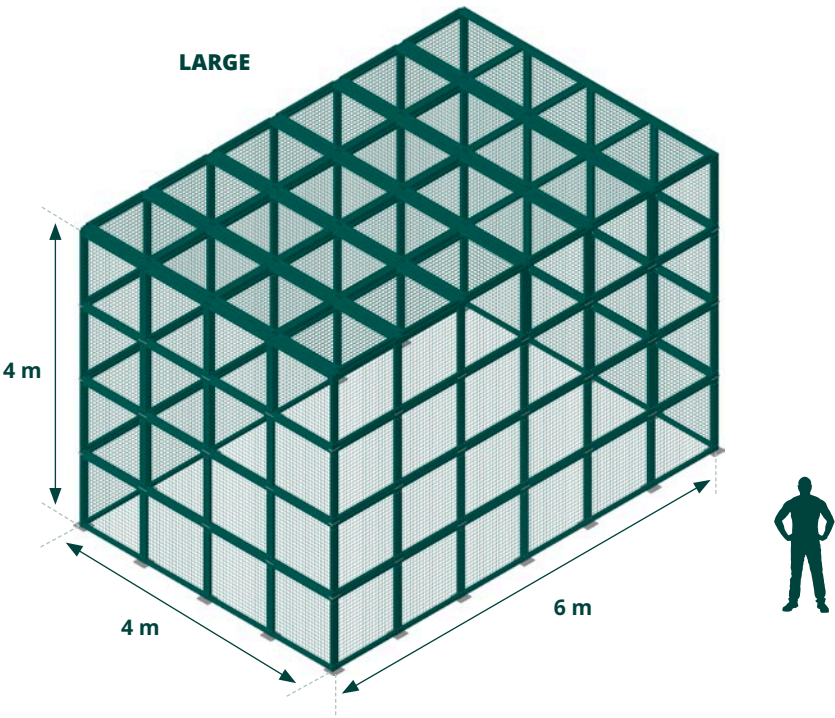

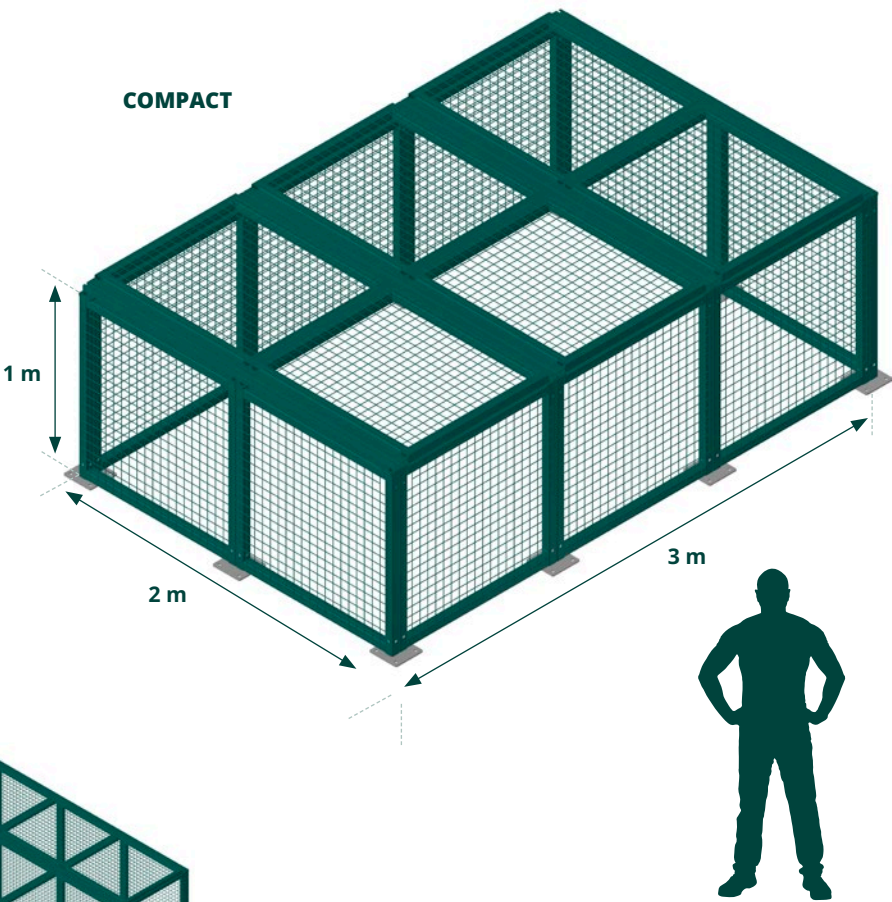

Dimension	Minimum	Maximum
Length	1 m	Project-specific
Width	2 m	4 m
Height	1 m	4 m

All measures are approximate.

Example Configurations:

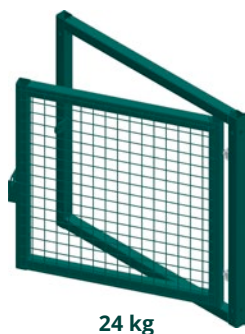

Enclosure size	Protected volume	Approx. weight
Compact	6 m³	356 kg
Medium	36 m³	1066 kg
Large	96 m³	2026 kg

Configuration and suitability depend on equipment dimensions, access requirements, and site conditions. One 20 ft Shipping Container contains screens, from which you can have either 3 medium sized or 2 large sized solutions.

Accessories:

ONE MODULE SIZED EXTRA HATCH

24 kg

EXTRA DOOR

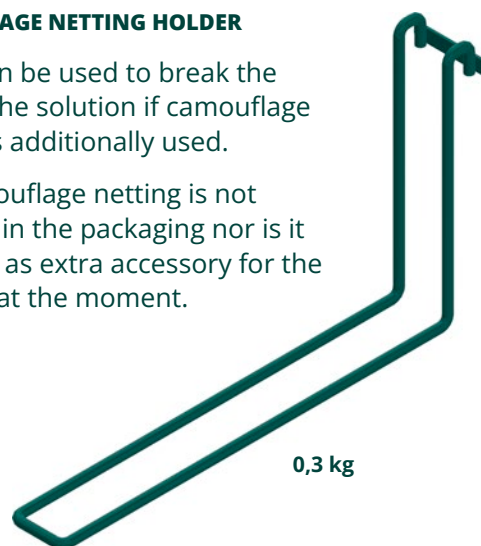

43 kg

CAMOUFLAGE NETTING HOLDER

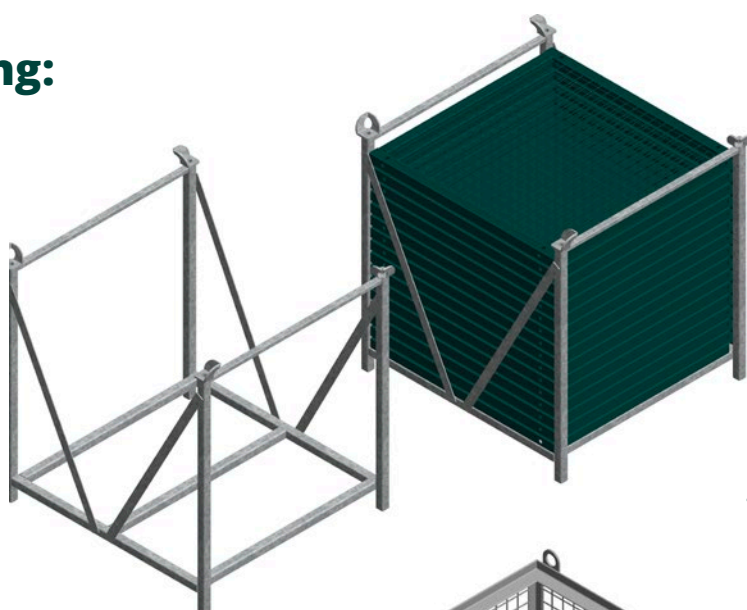

These can be used to break the form of the solution if camouflage netting is additionally used.

The camouflage netting is not included in the packaging nor is it available as extra accessory for the solution at the moment.

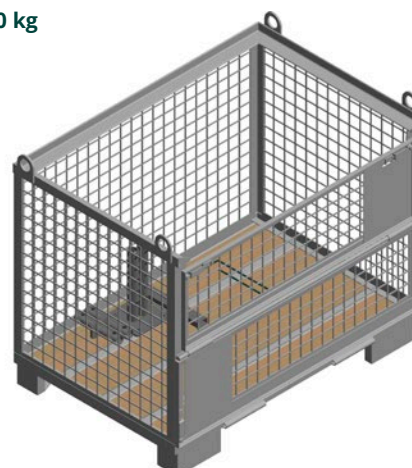

0,3 kg

Packaging:

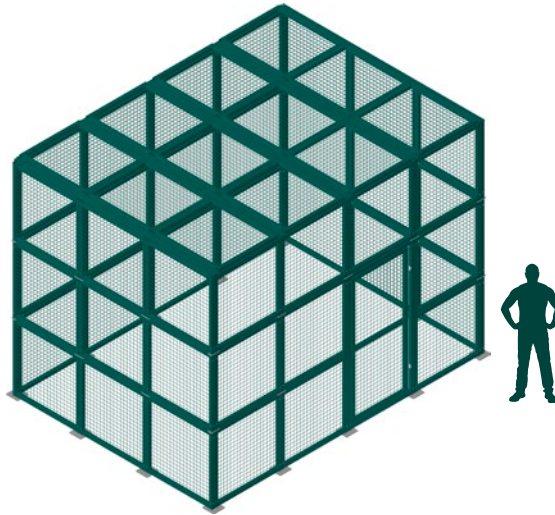

~240 kg

NORDIC STEEL MESH EXPERTISE SINCE 1948

With more than 75 years of experience, Tammet develops steel mesh solutions for demanding environments. Our drone protection enclosure brings this expertise to the physical protection of critical equipment.

Manufactured in Finland. All raw-materials sourced from NATO member countries.
